

Voltage Variable Attenuator, 32 dB Range DC - 12 GHz

MAAV-011017

Rev. V3

Features

- Analog Control
- Attenuation Range: 32 dB
- Input IP3: 52 dBm
- Input IP2: 80 dBm
- Supply Voltage: 3.15 to 5.25 V
- Operating Temperature: -40 to +120°C
- Low DC Power Consumption
- Lead-Free 3 mm 16-Lead Package
- RoHS* Compliant

Applications

- Microwave Radio
- Cellular, 5G Infrastructure
- WiFi, WiMax, LTE
- High Linearity Power Control

Description

The MAAV-011017 is a wide band voltage variable attenuator with analog control. It is assembled in a lead-free 3 mm, 16 PQFN package. This device is ideally suited for use where high accuracy, very low power consumption, and low intermodulation products are required.

V_{MODE} is a control pin to select either a positive or negative slope to the attenuation vs. control voltage curve. When V_{MODE} is high, there is a positive slope to the curve. There is a negative slope when V_{MODE} is low.

The part operates down to DC but the power handling degrades below 50 MHz. No DC blocks on RF pins are needed if the source and loads have a DC connection to ground.

Functional Schematic

Pin Function³

Pin #	Function
1,5,6,7,8,12,13	Ground
2,4,9,11	No Connection
3	RF Input
10	RF Output
14	Control Voltage
15	Supply Voltage
16	Slope Control
17	Exposed Pad ⁴

3. MACOM recommends connecting unused package pins to ground.

4. The exposed pad centered on the package bottom must be connected to RF, DC and thermal ground.

Ordering Information^{1,2}

Part Number	Package
MAAV-011017-TR0500	500 piece reel
MAAV-011017-SMB	Sample Board

1. Reference Application Note M513 for reel size information.

2. All sample boards include 5 loose parts.

1 * Restrictions on Hazardous Substances, compliant to current RoHS EU directive.

Voltage Variable Attenuator, 32 dB Range

DC - 12 GHz

Pin Description

Pin #	Name	Description
1, 5, 6, 7, 8, 12, 13	GND	These pins are not connected internally but should be grounded on the board in the shortest way.
2, 4, 9, 11	N/C	These pins are not connected internally and can stay opened (or grounded) on the board.
3	RF _{IN}	This pin is DC coupled to ground internally. No external coupling capacitor is needed if the DC voltage applied is 0V.
10	RF _{OUT}	This pin is DC coupled to ground internally. No external coupling capacitor is needed if the DC voltage applied is 0V.
14	V _C	Control voltage. Standard diode ESD protection at the input. An external RC low pass filter is recommended to reduce noise.
15	V _{DD}	Supply voltage. Bypass with 1nF close to the pin.
16	V _{MODE}	Slope control voltage. Digital input. 1.8V to 3.3V logic. Standard diode ESD protection at the input. An external RC low pass filter is recommended to reduce noise. V _{MODE} =V _C =0V is lowest attenuation.
17	E _P	Exposed paddle. This is where our reference case temperature is measured. Ground with as many vias as practical for electrical and thermal performance.

Voltage Variable Attenuator, 32 dB Range

DC - 12 GHz

Voltage Variable Attenuator, 32 dB Range DC - 12 GHz

MAAV-011017

Rev. V3

Recommended Operating Conditions

Parameter	Symbol	Unit	Min.	Typ.	Max.
Input Power	-	dBm	—	—	32
DC Supply voltage	V _{DD}	V	3.15	5.0	5.25
Junction Temperature ^{6,7}	T _J	°C	—	—	125
Operating Temperature ⁸	T _C	°C	-40	—	120

6. Operating at nominal conditions with T_J ≤ +125°C will ensure MTTF > 1 x 10⁶ hours.

7. Junction Temperature (T_J) = T_C + Θ_{JC} * (P_{RF})

Typical thermal resistance (Θ_{JC}) = 30 °C/W.

8. Defined as case temperature and measured on the exposed paddle.

Absolute Maximum Ratings^{9,10}

Parameter	Symbol	Unit	Min.	Max.
Input Power	—	dBm	—	36
DC Supply Voltage	V _{DD}	V	—	5.5
Control Voltage	V _C	V	-0.5	3.5
Junction Temperature	T _J	°C	—	150
Operating Temperature ⁹	T _C	°C	—	135
Storage Temperature	—	°C	-65	150

8. Exceeding any one or combination of these limits may cause permanent damage to this device.

9. MACOM does not recommend sustained operation near these survivability limits.

Power Supply Sequencing

Pins V_C and V_{MODE} should be at zero before and when V_{DD} is ramped up.

V_{DD} should not ramp faster than 1 V / 20 μs.

Pins V_C and V_{MODE} should be set to zero before V_{DD} is ramped down.

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these HBM class 1C devices.
