RoHS

MP3V5050, 0 to 50 kPa, Differential, and Gauge Pressure Sensor

MP3V5050

The MP3V5050 series piezoresistive transducer is a state-of-the-art, monolithic silicon, pressure sensor designed for a wide range of applications, but particularly those employing a microcontroller or microprocessor with A/D inputs. This patented, single element transducer combines advanced micromachining techniques, thin-film metallization, and bipolar processing to provide an accurate, high level analog output signal that is proportional to the applied pressure.

Features

- 2.5% maximum error over 0 °C to 85 °C
- Ideally suited for microprocessor or microcontroller-based systems
- Temperature compensated over -40 °C to +125 °C
- Patented silicon shear stress strain gauge
- Thermoplastic (PPS) surface mount package
- Multiple porting options for design flexibility
- Barbed side ports for robust tube connection

Application examples

- Pump/motor control
- Robotics
- Level detectors
- Medical diagnostics
- Pressure switching
- Blood pressure measurement

Related Documentation

The MP3V5050 device features and operations are described in a variety of reference manuals, user guides, and application notes. To find the most-current versions of these documents:

1. Go to the NXP homepage at:

   http://www.nxp.com/

2. In the Keyword search box at the top of the page, enter the device number MP3V5050.
3. In the Refine Your Result pane on the left, click on the Documentation link.

1 General Description

1.1 Block diagram

Figure 1 shows a block diagram of the internal circuitry integrated on a pressure sensor chip.

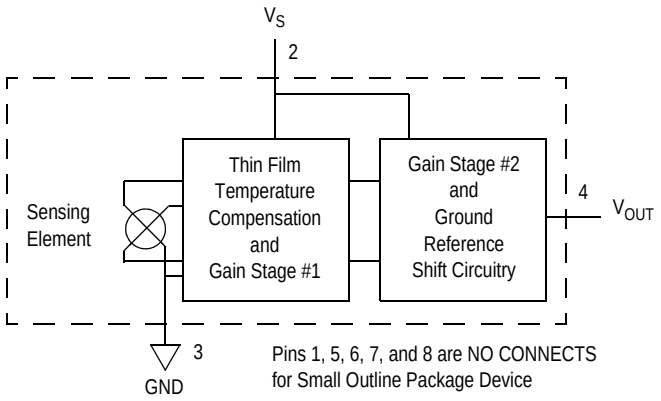

Figure 1. Fully integrated pressure sensor block diagram

1.2 Pinout

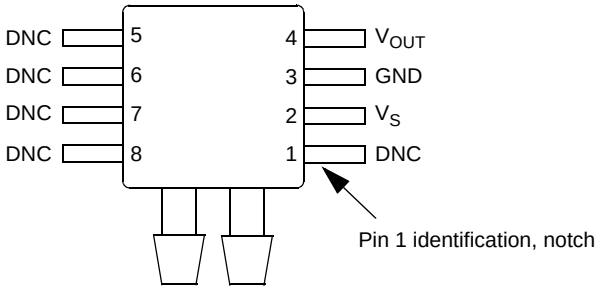

Figure 2. Device pinout (top view)

Table 1. Pin functions

Pin	Name	Function
1	DNC	Do not connect to external circuitry or ground. Pin 1 is denoted by notch.
2	V_S	Voltage supply
3	GND	Ground
4	V_{OUT}	Output voltage
5	DNC	Do not connect to external circuitry or ground.
6	DNC	Do not connect to external circuitry or ground.
7	DNC	Do not connect to external circuitry or ground.
8	DNC	Do not connect to external circuitry or ground.

2 Mechanical and Electrical Specifications

2.1 Maximum ratings

Table 2. Maximum ratings[1]

Rating	Symbol	Value	Unit
Maximum pressure (P1 > P2)	P_{max}	200	kPa
Storage temperature	T_{stg}	-40 to +125	°C
Operating temperature	T_A	-40 to +125	°C

1.Exposure beyond the specified limits may cause permanent damage or degradation to the device.

2.2 Operating characteristics

Table 3. Operating characteristics (V_S = 3.0 V_{DC}, T_A = 25 °C unless otherwise noted, P1 > P2. Decoupling circuit shown in Figure 5 required to meet electrical specifications.)

Characteristic	Symbol	Min	Typ	Max	Unit
Pressure range[1]	P_{OP}	0	—	50	kPa
Supply voltage[2]	V_S	2.7	3.0	3.3	V_{DC}
Supply current	I_O	—	7.0	10	mAdc
Minimum pressure offset[3](0 °C to 85 °C) @ V_S = 3.0 Volts	V_{OFF}	0.053	0.12	0.188	V_{DC}
Full-scale output[4](0 °C to 85 °C) @ V_S = 3.0 Volts	V_{FSO}	2.752	2.8	2.888	V_{DC}
Full-scale span[5](0 °C to 85 °C) @ V_S = 3.0 Volts	V_{FSS}	—	2.7	—	V_{DC}
Accuracy[6](0 °C to 85 °C)	—	—	—	±2.5	$\%V_{FSS}$
Sensitivity	V/P	—	54	—	mV/kPa
Response time[7]	t_R	—	1.0	—	ms
Output source current at full-scale output	I_{O+}	—	0.1	—	mAdc
Warm-up time[8]	—	—	20	—	ms
Offset stability[9]	—	—	±0.5	—	$\%V_{FSS}$

1.1.0 kPa (kilopascal) equals 0.145 psi.

2.Device is ratiometric within this specified excitation range.

3.Offset (V_{off}) is defined as the output voltage at the minimum rated pressure.

4.Full-scale Output (V_{FSO}) is defined as the output voltage at the maximum or full-rated pressure.

5.Full-scale Span (V_{FSS}) is defined as the algebraic difference between the output voltage at full-rated pressure and the output voltage at the minimum rated pressure.

6.Accuracy (error budget) consists of the following:

Linearity: Output deviation from a straight line relationship with pressure over the specified pressure range.

Temperature Hysteresis: Output deviation at any temperature within the operating temperature range, after the temperature is cycled to and from the minimum or maximum operating temperature points, with zero differential pressure applied.

Pressure Hysteresis: Output deviation at any pressure within the specified range, when this pressure is cycled to and from the minimum or maximum rated pressure at 25 °C.

TcSpan: Output deviation over the temperature range of 0 °C to 85 °C, relative to 25 °C.

TcOffset: Output deviation with minimum pressure applied, over the temperature range of 0 °C to 85 °C, relative to 25 °C.

Variation from nominal: The variation from nominal values, for offset or full-scale span, as a percent of V_{FSS} at 25 °C.

7.Response time is defined as the time for the incremental change in the output to go from 10% to 90% of its final value when subjected to a specified step change in pressure.

8.Warm-up time is defined as the time required for the product to meet the specified output voltage after the pressure has been stabilized.

9.Offset stability is the product's output deviation when subjected to 1000 hours of pulsed pressure, temperature cycling with bias test.

3 On-chip Temperature Compensation and Calibration

The MP3V5050 series pressure sensor operating characteristics, and internal reliability and qualification tests are based on use of dry air as the pressure media. Media, other than dry air, may have adverse effects on sensor performance and long-term reliability. Contact the factory for information regarding media compatibility in your application.

Figure 3 shows the sensor output signal relative to pressure input. Typical, minimum, and maximum output curves are shown for operation over a temperature range of 0 °C to 85 °C using the decoupling circuit shown in Figure 5. The output will saturate outside of the specified pressure range.

Figure 4 illustrates the Differential/Gauge Sensing Chip in the basic chip carrier (case 98ASB17757C). A fluorosilicone gel isolates the die surface and wire bonds from the environment, while allowing the pressure signal to be transmitted to the sensor diaphragm.

Figure 5 shows the recommended decoupling circuit for interfacing the output of the integrated sensor to the A/D input of a microprocessor or microcontroller. Proper decoupling of the power supply is recommended.

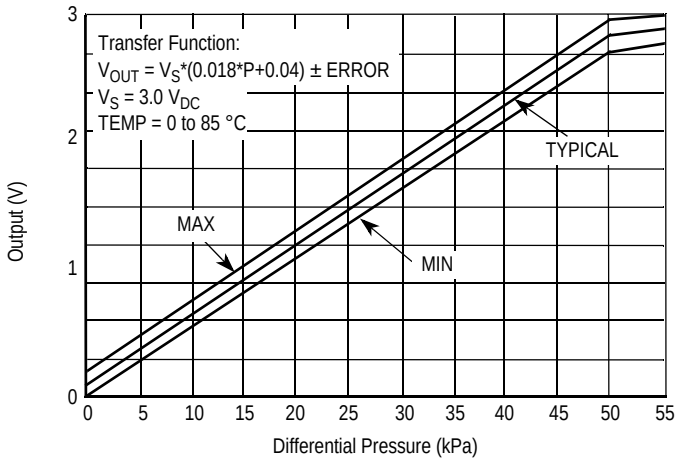

Figure 3. Output versus Pressure differential

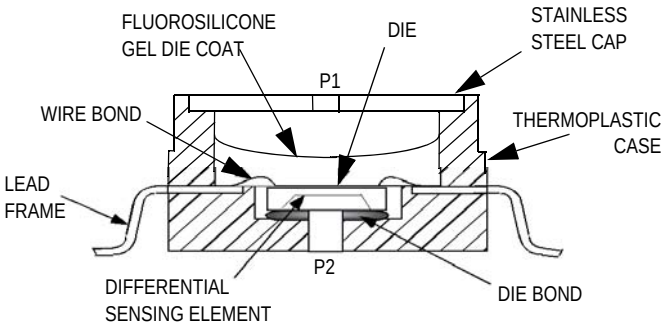

Figure 4. Cross-sectional diagram SOP (not to scale)

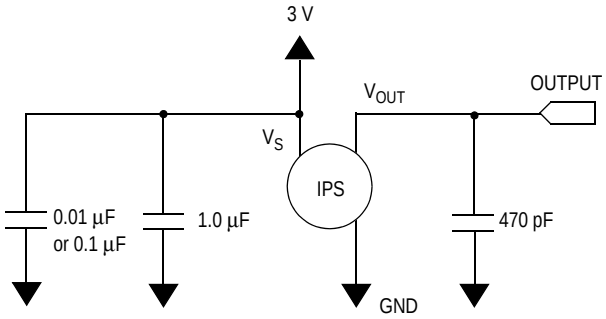

Figure 5. Recommended power supply decoupling and output filtering
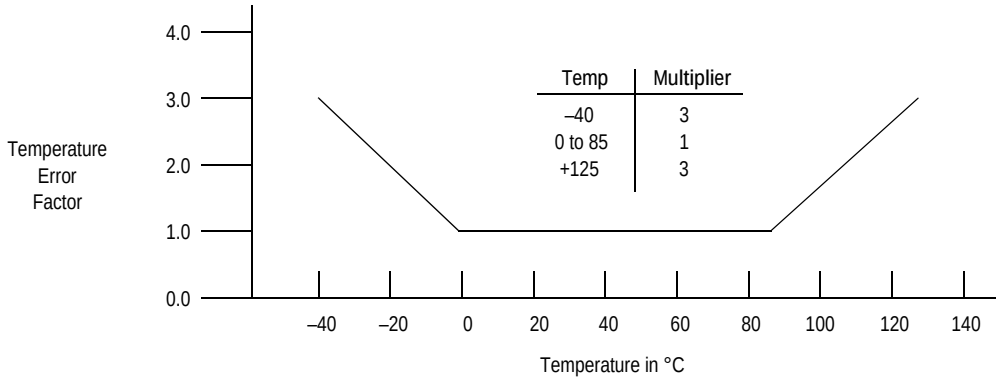
(For additional output filtering, please refer to Application Note AN1646)

Nominal Transfer Value: $V_{OUT} = V_S (P \times 0.018 + 0.04)$
$\pm$ (Pressure Error x Temp. Factor x 0.018 x V_S)
$V_S = 3.0\ V \pm 0.30\ V_{DC}$

Figure 6. Transfer function



NOTE: The Temperature Multiplier is a linear response from 0 °C to –40 °C and from 85 °C to 125 °C.

Figure 7. Temperature error band

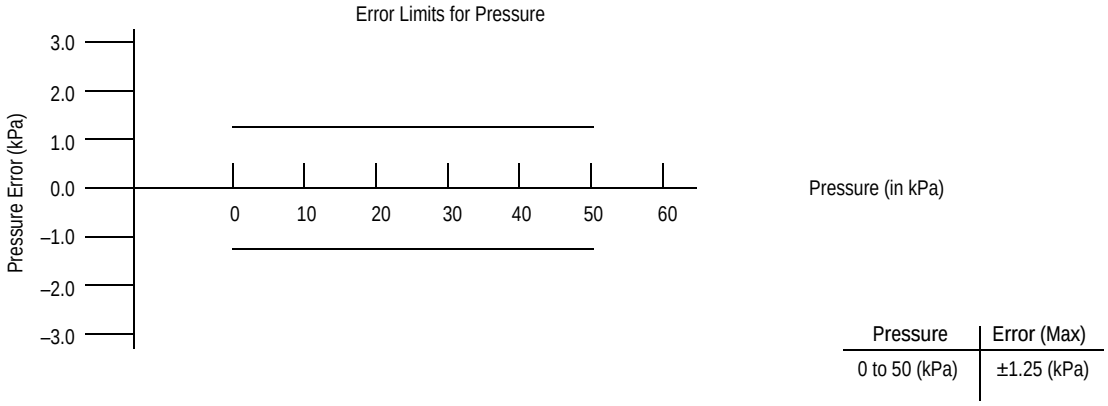


Figure 8. Pressure error band

4 Package Information

4.1 Pressure source 1 (P1)/ Pressure source 2 (P2) side identification

NXP Semiconductors designates the two sides of the pressure sensor as the Pressure source 1 (P1) side and Pressure source 2 (P2) side. The Pressure (P1) side is the side containing fluorosilicone gel which protects the die from harsh media. The MP3V pressure sensor is designed to operate with positive differential pressure applied, P1 > P2.

The Pressure (P1) side may be identified by using the table below:

Table 4. Pressure source 1 (P1)/Pressure source 2 (P2) side identification table

Part number	Case number	Pressure (P1) side identifier
MP3V5050GP	98ASA99303D	Side with port attached
MP3V5050DP	98ASA99255D	P1 is identified as the top-side port, above the leads.
MP3V5050GC6U/T1	98ASB17757C	Vertical port attached

4.2 Minimum recommended footprint for surface mounted applications

Surface mount board layout is a critical portion of the total design. The footprint for the surface mount packages must be the correct size to ensure proper solder connection interface between the board and the package. With the correct footprint, the packages will self align when subjected to a solder reflow process. It is always recommended to design boards with a solder mask layer to avoid bridging and shorting between solder pads.

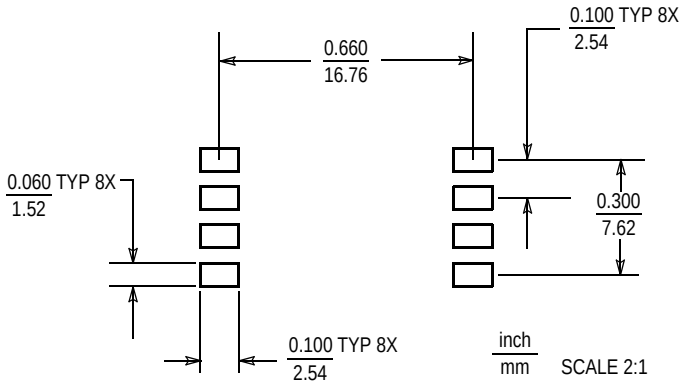

Figure 9. SOP footprint (case 98ASB17757C)

4.3 Package dimensions

5 Revision History

Table 5. Revision history

Revision number	Revision date	Description
1.2	06/2017	• Revised the case numbers for MP3V5050GP and MP3V5050GC6U/6T1. • Revised the package column of the ordering information table. • Updated “Freescale” references to “NXP.”
1.1	09/2015	• Updated format. • Updated package drawings with current version.
